EDUCATION

Bachelor of Science in Computer Science
The University of Texas at San Antonio

08/2018 - 12/2022   *San Antonio, TX*

EXPERIENCE

MedPLUS
|

01/2023 - Present   *Houston, TX*

Achievements/Tasks

- **Freelance work**
- Redesigned the MedPLUS website using modern UI technologies, including Javascript, Typescript, and React, resulting in an updated, user-friendly design.
- Improved the overall user experience by implementing intuitive navigation, clear calls to action, and streamlined content presentation, resulting in increased engagement and time spent on the site.
- Collaborated with my mentor to implement a responsive design, ensuring the website looks and functions optimally on all devices, including desktop, tablet, and mobile.
- Worked closely with the MedPLUS team to ensure the website accurately reflects the company's values, mission, and offerings, helping to strengthen the brand's identity and reputation.
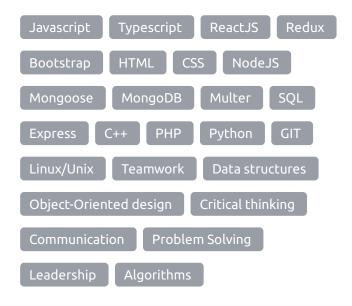

TDSC
|

01/2023 - Present   *Houston, TX*

Achievements/Tasks

- **Freelance work**
- Collaborated with my mentor to implement responsive design, ensuring the website looks and functions optimally on all devices, including desktop, tablet, and mobile.
- Upgraded the TDSC's website by implementing modern UI technologies like React, resulting in an updated and visually appealing design.

SKILLS

Javascript Typescript ReactJS Redux
Bootstrap HTML CSS NodeJS
Mongoose MongoDB Multer SQL
Express C++ PHP Python GIT
Linux/Unix Teamwork Data structures
Object-Oriented design Critical thinking
Communication Problem Solving
Leadership Algorithms

PROJECTS

Scared2Compile (00/2022 - 05/2022)
- **Worked with a team of 4 developers to deploy a web based eCommerce application**
- **Implemented the necessary frontend components with HTML, Bootstrap, and CSS**
- **Used javascript to render new components based on user input and display data from our database**
- https://github.com/askkew/Scared2Compile.git

Weather app (06/2019 - 12/2019)
- **Developed a ReactJS weather application that communicates with three different APIs to display weather data for any city entered. Designed with a mobile-first approach, the application utilized props to pass data between components, reusable components for efficiency, and made API calls to retrieve weather data. Deployed on an EC2 AWS instance for remote testing.**
